Scope of Work or Grant Application

The Locks Creek Roadway and Culvert Flood Mitigation Project is designed to deliver long-term flood protection and reliable roadway access for the Locks Creek neighborhood. By implementing robust drainage improvements and elevating critical roadway segments, the project will safeguard Locks Creek Road against flooding up to the 25-year storm event. This scope of work outlines the specific construction activities and outcomes that will be achieved through this investment.

The project will be delivered as a design-bid-build construction contract managed by the City of Fayetteville's Public Services Department. The primary components include:

Culvert Replacement: Removal of the existing 60-inch stormwater pipe and installation of a 5-foot by 12-foot reinforced concrete box culvert with engineered headwalls to significantly increase flow capacity beneath Locks Creek Road.

Roadway Elevation: Raising Locks Creek Road at identified low points to prevent overtopping during storm events, ensuring the roadway remains passable up to the 25-year flood event.

Utility Relocation: Relocation of an existing 8-inch water main and replacement of a 4-inch sanitary sewer line to accommodate the new road elevation and culvert structure.

Site Restoration: Restoration of all disturbed areas, including seeding, sodding, and repaving, to ensure long-term stability and minimal environmental impact.

What this will achieve:

Flood Protection: The new culvert and elevated roadway will provide reliable protection for Locks Creek Road against floodwaters up to the 25-year storm event, significantly reducing the frequency and severity of roadway closures.

Emergency Access: Improved drainage and road elevations will ensure emergency vehicles and residents can safely access and exit the neighborhood during and after heavy rainfall.

Infrastructure Resilience: Upgraded utilities and restored site conditions will ensure the long-term performance and sustainability of the roadway and neighborhood infrastructure.

Through these targeted construction activities, the project will mitigate a critical flooding bottleneck and greatly enhance the safety, resilience, and accessibility of the Locks Creek neighborhood. Upon completion, Locks Creek Road will be protected from flooding up to the 25-year storm event, providing peace of mind to residents and strengthening the community's overall disaster resilience.

Hydrologic and hydraulic (H&H) modeling and engineering drawings for the Locks Creek Roadway and Culvert Flood Mitigation Project are fully complete, and all necessary environmental and construction permits have been secured.
