Stadium Seating and Installation
RFP # 603-COF1516262

Company:	**Primary Contact:**
Camatic Seating inc. 12801 N. Stemmons Fwy, Ste 903, Farmers Branch, TX, 75234	Quinton van Tonder 1601 Keever Ct Louisville KY 40245 502 352 8280

Camatic Seating has a very clear understanding of the project requirements and schedule. We have been in several meetings with the City and Construction Management Team and have developed a construction plan that will meet all your requirements. Please refer to **Supplement #1** (Schedule) and **Supplement #5**(Project Work Instructions)

We have also included detailed layout drawings for the project that meets and exceeds the architectural seat counts. **Supplement # 3**(Layout Drawings)

Firm Qualifications:

Background.

For over fifty years Camatic Seating has delivered professional customer support, best quality products and innovative solutions. We are known the world over as the first choice in design, comfort and technology. Camatic has developed a national reputation for innovative design and manufacturing excellence. Throughout the 1980's and 1990's new designs and seating concepts were successfully introduced into theatre and stadium markets, resulting in the company becoming one of the world's largest manufacturer of theatre and stadium seating.

Major international success arrived during the mid 1990's with the company winning world-wide projects such as the refurbishment of the Pasadena Rose Bowl and the contract to supply stadium seating for the Atlanta Olympic Games. Further major successes ensued both domestically and around the globe. To facilitate the increasing amount of overseas interest in the theatre, stadium and performing arts seating products, international offices have been established in the United States and Europe. A network of Sales Agents in various strategic parts of the world completes the Camatic team and ensures that Camatic products are presented daily to potential users.

Camatic Seating has one of the most modern manufacturing facilities in the world and is arguably the only facility to maintain all phases of the seating design and manufacturing

process in-house. We are therefore able to provide a fully controlled standard across our entire range. Camatic Seating is one of only a few companies to use backing foam bonded to the fabric for a controlled stretch. This ensures a smooth finish, easy re-upholstery and extended lifetime of usage. Whether the seating requirement is for high resilient cold-cured polyurethane foam or gas-assist injection molding, Camatic Seating is equipped to ensure consistent quality at all stages of production. We have received major industry awards in recognition of our excellence in design, manufacturing and export achievements. Our research and development team continue to design, develop and improve Camatic Seating for the future.

Section 6
Required Forms

REQUIRED FORM 3 - PROPOSAL SUBMISSION FORM

RFP # 603-COF1516262

Stadium Seating and Installation

This Proposal is submitted by:
Company Name: CAMATIC SEATING, INC.
Representative (printed): QUINTON P VAN TONDER
Address: 12801 N. STEMMONS FWY. Ste. 903
City/State/Zip: FARMERS BRANCH, TX 75234
Email address: QUINTON.VANTONDER@CAMATIC.COM
Telephone: (302) 352-8280
(Area Code) Telephone Number

The representative signing above hereby certifies and agrees that the following information is correct:

1. In preparing its Proposal, the Service Provider has considered all proposals submitted from qualified, potential subcontractors and suppliers; and has not engaged in or condoned prohibited discrimination.
2. For purposes of this Section, discrimination means discrimination in the solicitation, selection, or treatment of any subcontractor, vendor or supplier on the basis of race, ethnicity, gender, age or disability or any otherwise unlawful form of discrimination. Without limiting the foregoing, discrimination also includes retaliating against any person or other entity for reporting any incident of discrimination.
3. Without limiting any other provision of the solicitation for proposals on this project, it is understood and agreed that, if this certification is false, such false certification will constitute grounds for the City to reject the Proposal submitted by the Service Provider on this Project and to terminate any contract awarded based on such Proposal.
4. As a condition of contracting with the City, the Service Provider agrees to maintain documentation sufficient to demonstrate that it has not discriminated in its solicitation or selection of subcontractors. The Service Provider further agrees to promptly provide to the City all information and documentation that may be requested by the City from time to time regarding the solicitation and selection of subcontractors. Failure to maintain or failure to provide such information constitutes grounds for the City to reject the bid submitted by the Service Provider or terminate any contract awarded on such bid.
5. As part of its Proposal, the Service Provider shall provide to the City a list of all instances within the past ten years where a complaint was filed or pending against Service Provider in a legal or administrative proceeding alleging that Service Provider discriminated against its subcontractors, vendors or suppliers, and a description of the status or resolution of that complaint, including any remedial action taken.
6. The information contained in this Proposal or any part thereof, including its Exhibits, Schedules, and other documents and instruments delivered or to be delivered to the City, is true, accurate, and complete. This Proposal includes all information necessary to ensure that the statements therein do not in whole or in part mislead the City as to any material facts.
7. It is understood by the Company that the City reserves the right to reject any and all Proposals, to make awards on all items or on any items according to the best interest of the City, to waive formalities, technicalities, to recover and re-bid this RFP.
8. This Proposal is valid for one hundred and eighty (180) calendar days from the Proposal due date.

I, the undersigned, hereby acknowledge that my company was given the opportunity to provide exceptions to the Sample Terms as included herein as Exhibit A. As such, I have elected to do the following:

___ Include exceptions to the sample contract in the following section of my Proposal:_____

✓ Not include any exceptions to the Sample Terms.

I, the undersigned, hereby acknowledge that my company was given the opportunity to indicate any Trade Secret

materials or Personally Identifiable Information ("PII") as detailed in Section 1.6.X. I understand that the City is legally obligated to provide my Proposal documents, excluding any appropriately marked Trade Secret information and PII, upon request by any member of the public. As such, my company has elected as follows:

___ The following section(s) of the Proposal are marked as Trade Secret or PII: _____

✔ No portion of the Proposal is marked as Trade Secret or PII.

Representative (signed): _____

REQUIRED FORM 5 – M/W/LSBE UTILIZATION

RFP # 603-COF1516262

Stadium Seating and Installation

The City maintains a strong commitment to the inclusion of LSDBEs in the City's contracting and procurement process when there are viable subcontracting opportunities.
Companies must submit this form with their proposal outlining any supplies and/or services to be provided by each City certified Small Business Enterprise (SBE), and/or City registered Minority Business Enterprise (MBE) and Woman Business Enterprise (WBE) for the Contract. If the Company is a City-registered LSDBE, note that on this form.
The City recommends you exhaust all efforts when identifying potential LSDBEs to participate on this RFP.

Company Name:	MINC INTERIORS - FAYETTEVILLE, NC

Please indicate if **your company** is any of the following:

____ MBE ___✓___WBE ____SBE ____ None of the above

If your company has been certified with any of the agencies affiliated with the designations above, indicate which agency, the effective and expiration date of that certification below:

Agency Certifying: _____ Effective Date: _____ Expiration Date: _____

Identify outreach efforts that *were employed* by the firm to maximize inclusion of LSDBEs to be submitted with the firm's proposal (attach additional sheets if needed):

We have tried to make Contact several time. We still plan to use some of their labor for this project.

Identify outreach efforts that *will be employed* by the firm to maximize inclusion during the contract period of the Project (attach additional sheets if needed):

[Form continues on next page]

Section 6
Required Forms

List below all **LSDBEs** that you intend to subcontract to while performing the Services:

Subcontractor Name	Description of work or materials	Indicate either "M", "S", and/or "W"	City Vendor #
MINC Irrigation	LABOR	W	

Total MBE Utilization	%
Total WBE Utilization	5 %
Total LSBE Utilization	%
Total LSDBE Utilization	%

Installation Criteria

Layouts are submitted based on the following conditions:

1. *Verification of compliance with all relevant building codes is the exclusive responsibility of the customer and / or architect.*
2. *Seating layout is subject to site survey.*
   a. *Field verify all set out dimensions including riser heights and plat depths prior to drilling. Any significant variation to layout must be approved prior to proceeding.*
   b. *When installation is not included in Camatic's contract, verification of site building dimensions is the responsibility of the client.*
3. *Concrete Fixing Criteria*
   a. *Concrete is to be a minimum of 20 MPa (3000psi) compressive strength (28 day) and have a density of not less than 2400 kg/m³ (150lb/ft³).*
   b. *The surface shall be smooth and flat to with in a maximum of +/– 3.00mm (1/8") over 1500mm (60") measured with a straight edge.*
   c. *Risers shall be plumb to +/– 3.0mm (1/8") over 1500mm (60").*
   d. *Floor mounted seating will require minimum 75mm (3") thick concrete with minimum 45mm (1¾") impediment free anchor installation zones at mounting locations.*
   e. *Riser mounted seating will require minimum 100mm (4") thick concrete with minimum 65mm (2½") impediment free anchor installation zones at mounting locations.*

   If site details / specifications do not conform to the above, Camatic is unable to accept responsibility for the installation.
4. *Timber Floor Fixing Criteria*

   Due to the nature & variations in timber floors Camatic P/L is unable to supply specific specifications. The following information is based on installations that to have been successfully installed. Timber floors and structure should have the integrity to accommodate the chair loading requirements.

   Preferred Method: The use of specific timber fixings (such as: Type 17 or coach screws) on a one piece or composite structural ply floor of 32mm thickness. If a 32mm structural ply floor is not available, then appropriate battens fixed to the underside of the floor must be used to provide suitable depth of fixing engagement.

   When fixing chairs to timber flooring, it is recommended that flooring details be submitted to Camatic Pty Ltd, for review prior to finalizing timber flooring specifications.

The seat like no other

Put simply, Quantum seating maximizes capacity, delivers superior comfort and ensures long-term durability. Quantum has been designed in consultation with leading ergonomists and is arguably the most comfortable seat available today. The patented beam mount system that Quantum uses is a revolution. Seats are evenly spaced in every row, and can be easily added to, removed or re-spaced as events require. Quantum's low maintenance requirements have helped make this seating system extremely popular with venue operators around the world.

Features

- Guaranteed increase of venue capacity
- Gravity tilt seat - silent and reliable
- Enclosed mechanisms ensure safety
- Beam mounting - provides for future upgrades
- Quick installation

Options

- Avaliable in 3 back heights 770, 850 and 960 highback
- Range of standard colours
- Seat and Row ID's
- Cup holders
- Fixed armrests
- Aisle lights
- For seat pads see Quantum VIP

Quantum is the seat of choice. You will find it in world class stadiums such as Seattle's Seahawks Stadium, Chicago's Soldier Field, Australia's Telstra Dome, Portugal's Benfica Stadium, and Centre Court at Wimbledon.

Quantum is available in three back heights and features Camatic Seating's silent gravity tilt seat, removable upholstery, optional arms and tablets.

Universal options
The following options are available on all Quantum chairs:
- Armrests – single (shared) or double
- ADA access armrests
- Row end panel armrests
- Cup holders

Mounting system
The Quantum beam mount system enables bracket positioning at infinite locations along a row, thereby eliminating any loss of seating numbers due to expansion joints, angle changes or step interference.

Seat configuration
Quantum seats are installed at uniform centres along a corrosion resistant aluminium beam with two vandal proof locking toggles.

Gravity tilt seats
The innovative gravity tilt seats, using fully enclosed counterweights, are silent, dependable and reliable. A ¾ pushback mechanism ensures easy access for patrons.

Removable upholstery
When fitted, seat and back pads are fixed in five locations. These can be removed by unlocking a single vandal-proof fixing.

Easy installation
Once the Quantum beam system is installed, seats are delivered fully assembled and can be positioned quickly and with ease.

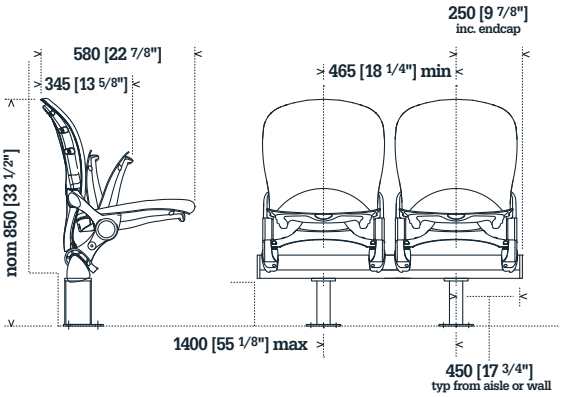
Quantum™

Quantum 850
Sporting arenas see a lot of action both on and off the field, which is why the Quantum 850 is such a popular choice with venue operators worldwide.

It provides maximum comfort, easy maintenance and like the entire Quantum range it will increase the patron capacity of any venue.

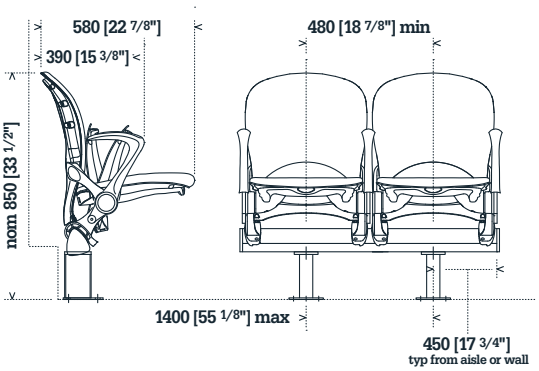
Row end panels can be customized with a team or venue insignia so any arena can put its own stamp on this popular seating system.



Quantum 770/850 Upholstered
The Quantum 770/850 Upholstered range provides a more refined seating solution for arenas, stadiums, auditoriums and lecture theatres.

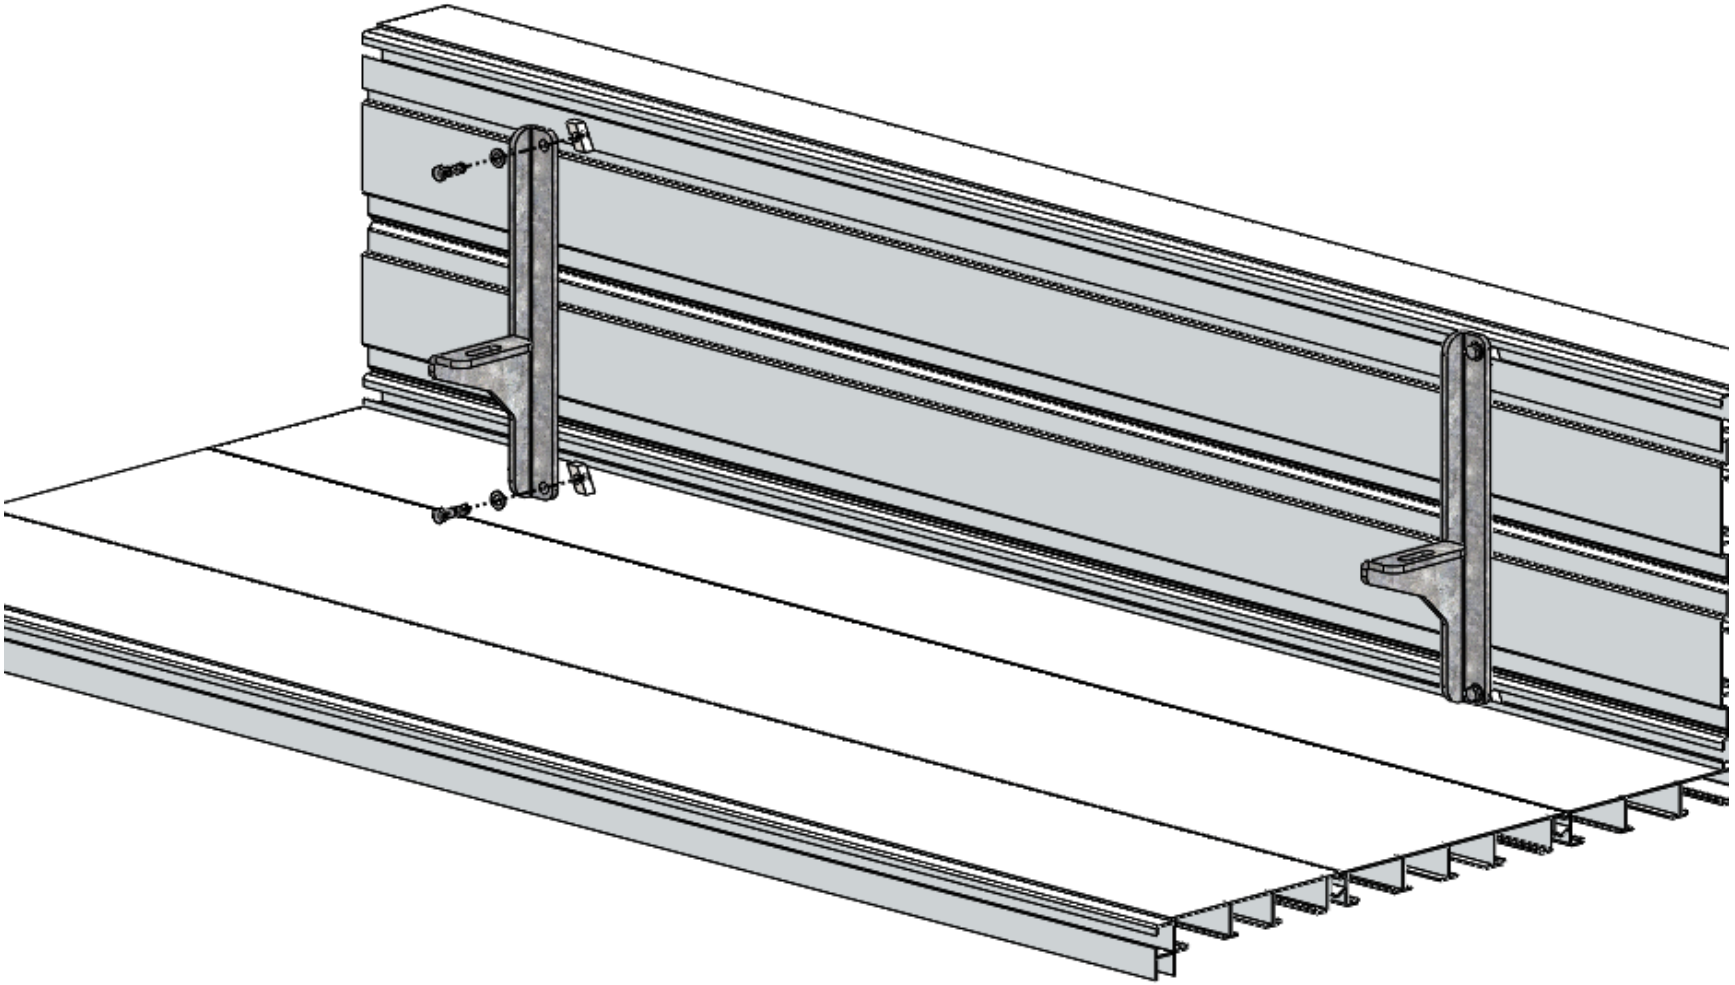
With cushioned, tamper resistant upholstery and a robust ergonomic design, Quantum Upholstered offers a superior level of comfort and style.

Venue operators will appreciate low maintenance design elements and the flexibility of configuration options, with single or double armrests and writing tablet arms also available. Meanwhile spectators will appreciate a truly sophisticated and comfortable seat.

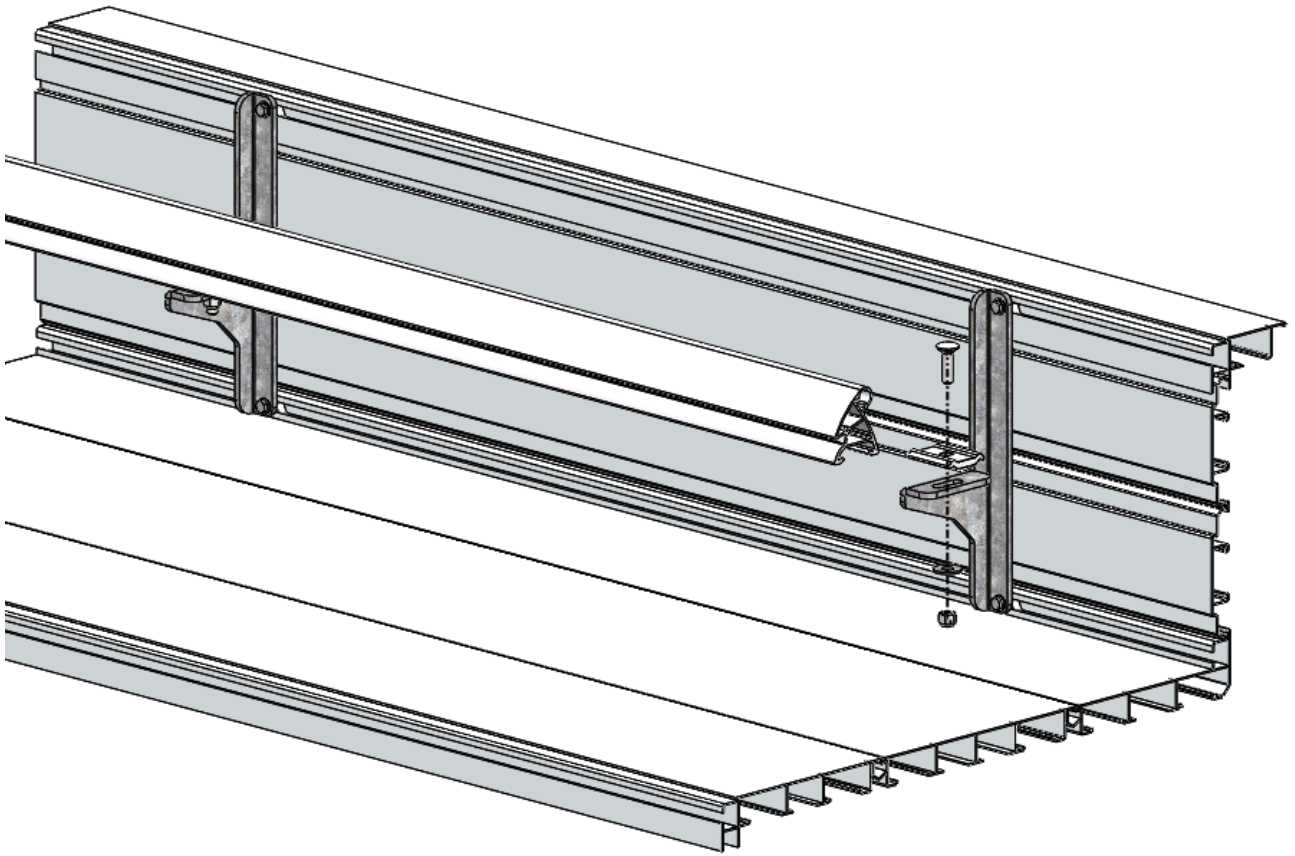


QUANTUM BLEACHER SEATING

1. BEAM BRACKET INSTALLATION



2. BEAM INSTALLATION



3. CHAIR AND ARM INSTALLATION

The Quantum Seating System

October 28, 2014

Quantum Feature	Client Benefit
Increased Seating capacity	- Up to 3% extra seats. - Ability to reconfigure seats for special events & the changing needs of the venue.
Infinite mounting location of the chair along the beam.	- Uniform seat spacing along the row. - Chair spacing easily adjusted to accommodate accessories such as writing tablet, interactive arm, table, etc. - Chair spacing easily adjusted to suit site variations.
Infinite location of mounting brackets between 0" & 49" spacing.	- Easily reconfigured to straddle seismic joints, expansion joints, drainage grates & site variations. - Easily straddle old/existing anchors in a re-seat venue. - Totally independent of chair location.
Chair & beam support bracket are totally independent.	- No obstruction to the location of the chair. - No requirement to accurately locate beam support brackets that could interfere with seat locations. - The chair is free to slide unobstructed along the beam. - Facilitates easy reconfiguring of seat centers. - Maximizes seat quantities when reconfiguring the seating. - Minimizes cost to reconfigure seating.
Custom profile extruded aluminum beam supplied in standard lengths.	- Corrosion resistant to last the life of the venue. - High strength with torsional rigidity to prevent seat bounce. - Ability to replace only the seats in high use venues without the need to replace the beam & brackets. - Beams are cut on site to ensure accurate fit between steps & at angle changes. - Cantilever over seismic joints, expansion joints & other obstructions to provide continuous seating.
Universal beam mounting.	- Facilitates easy attachment to any substrate. - Suitable for Tread mount, High riser, Low riser (above 5 ½"), Removable & Retractable platforms.
Bridge an angle change of up 12 degrees.	- Provides continuous run of chairs within the row. - Eliminates requirement for tread (floor) mounting at angle change. - Eliminates the requirement for an additional standard at an angle change. - Increases potential for additional seat quantity in regular layout. - Facilitates additional seating quantities when reconfiguring. - Allows wider & evenly spaced seat centers along the row.

The Quantum Seating System

October 28, 2014

Quantum Feature	Client Benefit
Modular chair by design. One sized chair.	- Provides ability to progressively upgrade the chair as revenue permits by adding arms, arm spacers, upholstery pads, cup-holders, easy access arms, etc. - Identical seats at all locations. - Reduced attic stock.
Quick lock toggle system	- Fail safe attachment to beam (Chair is securely supported & safe to use even if the quick lock toggle is not engaged) - Fast installation. - Secure the chair at any location along beam. - Change over chairs in less than 40 seconds.
Engineering grade polymer side supports & pivot mechanisms	- Corrosion free. - Maintenance free. - High strength & durability. - Inherent flexibility to aid comfort of the chair.
Fully enclosed pivot mechanism	- No finger entrapments - Totally maintenance free for the life cycle of the product.
3/4 push back on seat	- Ensures easier access/egress from rows.
Gravity tilt seat	- Consistent seat alignment of tilt position over product life. - Totally maintenance free (no spring). - Silent operation
Polypropylene seat & back -narrow envelope -smooth surface	- Ergonomic contour provides enduring comfort. - Inherent flexibility to aid comfort. - Easier access, longer row lengths. - Easy cleaning.
Gas injection technology to core out seat & back channels	- Added strength and durability.
Sleek & slim line back profile	- Increased knee room.
Snap on seat numbers	- High visibility. - Vandal proof.
3 Back heights – 31”, 33” & 36” (770 mm, 850 mm, 960mm)	- Consistency of design. - Differentiation of areas.
Detachable seat & back Upholstery pads with key lock system.	- Quick change over, easily replaced with single fixing. - May be retro-fitted. - Minimizes attic stock.
Contoured molded foam to seat pad.	- Long term durability & comfort.

Camatic Seating, Inc 1010 West Euless Blvd suite 110 Euless, TX 76040
Telephone: 214.507.5232 Facsimile: 817.633.2190

The Quantum Seating System

October 28, 2014

Quantum Feature	Client Benefit
Weatherproof foam	- Suitable for outdoor applications.
Purpose designed cup-holders.	- Back mount, arm mount & wall mount options available to complement the aesthetics of the chair.
Modular arm system: - Standard. - End of row panel arm. - Easy access folding.	- Adjustable to suit seat spacing. - Modular connection of arm to side support facilitates centering the arms between the chair backs at larger seat centers (no double arms required up to 22 ½" centers) - Facilitates easy reconfiguring. - May be retro-fitted. - Removable to facilitate beam mounting of accessories such as writing tablets.
Writing tablets	- Beam mounted for easy configuring between chairs.
Reconfigurable for special events &/or changing venue needs.	o Seating may be reconfigured for special events by adjusting seat centers along the beam to increase or decrease seating capacity. - Key requirements to maximize reconfigured quantities include: • Chair & beam support must be independent allowing the chair to slide along the beam unimpeded. • Reconfiguring is maximized using a modular arm attachment to the chair – particularly important at wider centers. (Double arms & fixed arms integral to side-support significantly inhibit reconfiguring. • Modular mounting of the arm to the side of the chair minimizes cost of reconfiguring. Direct mounting of the arm to the beam is not desired. o Chair may be reconfigured to meet the changing needs of the venue – increase or decrease the club seat quantities.

CAMATIC

Quantum Seating System Specifications

QUANTUM 770 / 850 SEATING SPECIFICATIONS

1. THE SYSTEM:

- Two piece shell with concealed hinges
- Gravity tilt mechanism.
- Tilt Seat mechanisms are safe guarded with no finger or clothing entrapments
- Chairs mounted to continuous beam at fully adjustable, uniform seat centres.
- All seats are independently mounted with no connection to adjoining chair
- Beam mount brackets totally independent of seat mount
- Floor (tread) or riser mount, beam support brackets available
- Suitable for infinite centre positions from a minimum of 470 mm
- Upholstery , arms and cupholders may be retrofitted.
- Optional back heights 770mm 850 mm.
- Approximate seat weight 5.6 kg

2. CONFIGURATION / DIMENSIONS

Seat Dimensions:

Seat dimensions meet the following requirements.

Seat Centres - without arm	- 470mm	[18.5"] (Minimum)
Seat Centres - with arm	- 480mm	[19"] (Minimum)
Seat Width	- 420mm	[16.5"] (Minimum)
Overall Dimension (Seat Up -770 back)	- 325mm	[12.75"] (Maximum)
Overall Dimension (Seat Up – 850 back)	- 345mm	[13.5"] (Maximum)
Overall Dimensions (Seat Down 770 back)	- 530 mm	[21"] (Maximum)
Overall Dimension (Seat Down 850 back)	- 560 mm	[22"] (Maximum)
Back Height (above floor) -	- 770mm/850 mm	[30"/33.5"] (Minimum)
Seat Height	- 450mm	[17.5"]

3. MATERIALS

Mounting Beam:

Extruded, hollow section aluminium beam of alloy 6351 T6, clear anodised to 20µm.

Beam shall provide continuously variable location of mounting brackets to allow co-ordination of mountings with precast reinforcement and building fixtures. Seating to attach to beam independently of brackets, allowing infinitely adjustable, even seat spacing and accurate
Aisle alignment.

Plastic Components:

Plastic seat and back components

Are injection moulded co-polymer polypropylene. Plastic formulation is fully compounded with ultra-violet inhibitors prior to the manufacturing process. UV inhibitors are added at a rate to ensure no significant colour or plastic deterioration for a period of 5 years.
When specified or required FR additives are also compounded into the plastic formulations.

Hinge Mechanism:

The Hinge / pivot mechanism is injection moulded glass reinforced polyamide black in colour and contains ultra violet inhibitors.

Hinge / pivot mechanism return seat to a 3/4 position automatically through a gravity tilt counter-weight system, requiring no adjustment or lubrication for the life of the installation. Counter weight are fully enclosed in rear of seat component. No spring return systems are used. Hinge mechanisms perform to the requirements of ASTM F851-83 (remain operational after 100,000 cycles of operation).

Standards: (Side Supports)

The standards/ supports are injection moulded glass reinforced polyamide, black in colour and contain ultra violet inhibitors.

Standards provide tamper resistant quick action attachment to the beam, allowing reconfiguration of seating without disturbance of anchors, substrate or building finishes.
Connection of supports to backrest is via two vandal proof corrosion resistant screws

The supports provide connection for armrests that may be installed on delivery or at a later date (for armrest details refer to Accessories)

Backrest Component:

The 770 mm backrest has a minimum height of 335mm [13"] above the seat component. The 850 mm backrest has a minimum height of 400mm [15.5"] above the seat component. The backrest extends below the seating surface to provide foot protection. The upper face (sitting surface) is free of fasteners and textured to minimise slipping, and capable of accepting upholstery pad on delivery or at a later date. Rear face is free of dirt or water traps, smooth, with minimal texture.

Seat Component:

The seat depth as measured from the's' point of the backrest is a minimum of 420mm [16.5"]. Seat upper face (sitting surface) is free of fasteners and textured to minimise slipping, and capable of accepting upholstery pad on delivery or at a later date. Lower face is free of dirt traps, smooth and with minimal texture. The leading edge of the seat includes an angled recessed location for seat number.

4. FIXINGS

Concrete Riser Mounting:

Quantum is suitable for mounting to risers with minimum riser height 175mm [7"] and maximum height 600 mm [23.5"] Note: Clients remain responsible for ensuring the provisions of adequate fall barriers for each row behind Quantum Seating (applies particularly in high riser situations).

Anchors are to be installed to Camatic specification, and meet the seat design loads. Std fixings are, 2 or 3 x M10 Mechanically galvanised studs (configuration depends on riser height), chemically set, to a minimum 65mm embedment, with mechanically galvanised nut and washer.

Concrete Tread Mounting:

Anchors are to be installed to the Camatic specification, and meet the seat design loads. Std fixings are 3 x M10 HKD Mechanically Galvanised with High Tensile Hex Bolts.

Removable Mounting Brackets (Tread Mounting Only):

Mounting brackets can be supplied to convert fixed stadium chair design to two (2) and three (3) seat removable units. These units are fixed with two (2) x M10 anchors with hand-wheels, that require no tools to remove and remain attached to bracket when not in use.

5. QUANTUM ACCESSORIES

Arm Rests

Injection moulded glass reinforced polyamide armrests attach directly to the chair at the point provided on the standard. Armrests are closed hollow section and free of external ribbing, with smooth top and front surfaces to prevent entanglement in clothing. Polyamide is black and contains ultra violet inhibitors.

All seating units are capable of accepting armrests on delivery or at a later date.

Cup-holders:

Rear-mount Cup-holders are designed specifically for attachment to the chair; the plastic is injection moulded co-polymer polypropylene and is compounded with ultra-violet inhibitors for outdoor applications prior to the manufacturing process. Colour to match that of the seat and backrest.

Arm mount cup-holders are designed specially for attachment to the Quantum arm. These cup-holders are generally used in the front rows and companion chairs. The cup-holder is of injection moulded Polyamide, black to match the arms and contains ultra violet inhibitors.

Seat Pad:

Seat pad is fixed at no less than five (5) positions, one (1) in each corner and an additional centre front fixing point. The pad is constructed of injection moulded polypropylene inner (typical wall thickness 3.5mm) with a 25mm [1"] moulded polyurethane foam cushion.

Cover is typically upholstered in an easy clean UV stabilised marine grade vinyl suitable for indoor and outdoor applications .Fabrics to client's requirements may be specified for indoor applications. In harsh outdoor applications, the moulded urethane foam cushion can be replaced with a 25mm [1"] closed cell foam cushion to prevent absorption of moisture.

Backrest Pad:

Back pad is fixed at no less than five (5) positions, one (1) in each corner and an additional centre front fixing point. Pad is constructed of injection moulded polypropylene inner (typical wall thickness 3.5mm) with a 12 mm [1/2"] polyurethane foam covering. Cover is typically upholstered in an easy clean UV Stabilised marine grade vinyl suitable for indoor and outdoor applications. Fabric to client's requirements may be specified for indoor applications.
In harsh outdoor applications the moulded urethane foam cushion can be replaced with a 12mm [1/2"] closed cell foam cushion to prevent absorption of moisture.

960 mm High Back Extension

An extra high back extension is available (only with upholstery pad).

Seat Numbers

Seat Numbers snap into front edge of seat and angle upward, with an option to have further mechanical fixing if required

Row Identification

Row Number plate is black with white numbering and provides for up to 3 digits 12 mm {1/2"} in height

Tablet Arms

Details on request

6. PERFORMANCE / STANDARDS / REFERENCES

General:

The completed Quantum chair installation will provide the following minimum performance requirements.

Anchor Bolts:	All concrete fixings are non-corrosive material.
Fasteners:	All fasteners Non corrosive.
Metal Finishes:	All finishes are suitable for outdoor exposure / marine environments.
Plastic Components:	Exterior grade plastics. UV Stable
Seat Pivot:	Seat will raise without assistance, by gravity system. Spring systems not used
FIFA	The Quantum complies with the FIFA recommendations for stadium seating.

Manufacture:

The following manufacturing standards are adhered to:

AS 1442-1992	Carbon steels and carbon-manganese steels - Hot-rolled bars and semi-finished products
AS 1517-1991	Tinplate and blackplate
AS 1365-1996	Tolerances for flat-rolled steel products
AS 1450-1983	Steel tubes for mechanical purposes
AS 1163-1991	Structural steel hollow sections
AS 1554-2000	Structural steel welding

AS 3834-1999 materials	Quality requirements for welding - Fusion welding of metallic
AS 1866-1997 and hollow shapes	Aluminium and aluminium alloys - Extruded rod, bar, solid
AS 1231-2000	Aluminium and aluminium alloys - Anodic oxidation coatings
AS 4506-1998	Metal finishing - Thermoset powder coatings
AS 4680-1999 articles	Hot-dip galvanized (zinc) coatings on fabricated ferrous
ISO 3834-1:1994 materials	Quality requirements for welding - Fusion welding of metallic

Durability Testing:

The Quantum range of stadium seating complies to the following.

EN 12727	"Furniture - Ranked Seating - Test methods and requirements strength and durability".
BS 4875: 1985	"Furniture Performance Testing" - Rating 5

Method 1 - En 12727 "The chair is tested and complies to En 12727 Level 4"

Seat Static Load (front edge of seat)	- 200 Kg [440 lbs.]
Back Static Load (forward)	- 75 Kg [165 lbs.]
Seat Cyclic Load (SLP)	- 95 Kg [210 lbs.] applied 300,000 times
Back Cyclic Load (BLP)	- 33 Kg [75 lbs.] applied 300,000 times
Arm Static Load (Vertical)	- 100 Kg [220 lbs.]
Arm Static Load (Horizontal)	- 90 Kg [200 lbs.]

This test incorporates and exceeds AS 4438 - Level 6 and BS 4875 – Level 4

These Following tests are done internally.
Method 2 - Tested and Complies to Drop Impact Test [Sand Bag to Seat @ SLP]

Load 40 lbs. Height	6" - 25,000 Cycles
Load 40 lbs. Height	8" - 25,000 Cycles
Load 40 lbs. Height	10" - 25,000 Cycles
Load 40 lbs. Height	12" - 25,000 Cycles
Total Number Loads	100,000 Cycles

Method 3 - Tested and complies with Oscillating Impact Test [Sand Bags to Back@ BLP)]

Load 2 x 40 lbs. Distance	6" - 15,000 Cycles
Load 2 x 40 lbs. Distance	8" - 15,000 Cycles
Load 2 x 40 lbs. Distance	10" - 15,000 Cycles
Load 2 x 40 lbs. Distance	10" - 15,000 Cycles
Total Number Loads	60,000 Cycles

Method 4 - Standard Test Method for Self Rising Seat Mechanisms ASTM 851 - 87

Passed 100,000 Cycles

Plastic Ultra Violet Deterioration

Quantum seat and backrest exceed the following test requirements:

Accelerated weatherometer test: Exposure 2000+ hours, black panel temperature 89+/- 3 Degrees C.

No micro-cracks are present after exposure period.

Flammability:

The Quantum chair and / or materials used in its manufacture comply with the standards listed below:

BS 5852 Source 0	Furniture Assessment of the ignitability of upholstered furniture Part 1 – Smouldering cigarette
BS 5852 Source 1	Furniture Assessment of the ignitability of upholstered furniture Part1 – Ignition source, match flame equivalent
EN 1021-1: 1998	Equivalent to BS 5852 Source 0
EN 1021-2: 1998	Equivalent to BS 5852 Source 1
ISO 8191-1: 1998	Equivalent to BS 5852 Source 0
ISO 8191-2: 1998	Equivalent to BS 5852 Source 1
FMVSS No.302	Federal Motor Vehicle Safety Standard No. 302
CA 117: 2000	Requirements, Test Procedure and Apparatus for Testing the Flame Retardance of Resilient Filling Materials Used in Upholstered Furniture'. State of California, USA

On request, the Quantum chair can be manufactured to comply with the following standards:

AS 1530.3:1989	"Methods for fire tests on building materials, components and structures". Part 3 Simultaneous determination of ignitability, flame propagation, heat release and smoke release.
BS 5852 Source 2	Furniture Assessment of the ignitability of upholstered furniture Part 2 – Ignition source, butane flame equivalent
BS 5852 Source 5	Furniture Assessment of the ignitability of upholstered furniture Part 5 – Smouldering cigarette
CA 133: 2000	Requirements, Test Procedure and Apparatus for Testing the Flame Retardance of Resilient Filling Materials Used in Upholstered Furniture'. State of California, USA

Note:

1. When a client specifies an upholstery fabric, flammability compliance is subject to re-verification.

2. Testing to other standards can be performed on request.

Quality:

Camatic seating holds the following quality certifications

ISO 9001-2000	Quality Management System.
ISO14001	Environmental Management System.

7. INSTALLATION

Mounting Brackets and Beam

1. Bracket (centre-line) to be inset 300mm [12”] from aisle to aid cleaning and subsequently at a maximum spacing of 930mm [36.5”] for tread mount and 1250mm for riser mount.
2. Riser mount brackets to be set out to provide uniform height across each row.
3. Brackets to be attached with a minimum of 2 x M10 anchors in accordance with manufacturer’s instruction.
4. Anchor type to be determined in accordance with service environment and strength & configuration of reinforced concrete substrate.
5. Brackets to be located so as to avoid conflict with expansion joints and hence eliminate the use of carrier plates
6. Mounting beam to be trimmed on site to suit row lengths and installed in continuous straight lengths. Visible beam ends to be capped

Chairs

1. To be delivered fully assembled in manufacturers packaging and able to be placed directly on beam.
2. Seating positions to be adjusted to ensure accurate aisle alignment and maximum even spacing in each row
3. Maintain spacing at mid row angle changes up to 10 degrees by positioning seating across the angle as required

Cleaning

General: Removal of bags and final clean by others.

8. WARRANTY

General:

The warranty shall be in addition to and not a limitation of the other rights the Owner may have against the Contractor, installer, or Manufacturer, under the Contract Documents.

Camatic provides a warranty for the replacement of chairs found to be defective in appearance or unusable due to defects in performance, as outlined below

General Warranty Period:	12 Months after date of Substantial Completion.
Special Warranties:	Camatic provide the following special warranties:
Chair Standards -	5-year period, against failure of material, corrosion or excessive colour change.
Hinge mechanism -	5-year period, against failure of hinge to provide for automatic rising.
Plastic components -	5-year period, against cracking, crazing or excessive colour deterioration.

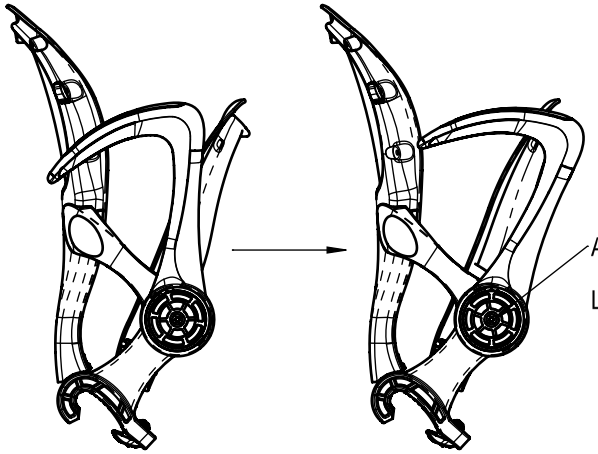
INSTALLATION INSTRUCTIONS:

1. CHAIRS ARE PACKAGED WITH A LOOSE ARM, ROTATE ARM FORWARD TO THE POSITION AS SHOWN BELOW, ENSURE THE HUB TEETH ARE ENGAGED BETWEEN ARM AND HUB THEN TIGHTEN THE SCREW IN THE CENTRE OF THE PIVOT HUB.



LOOSE ARM AS SUPPLIED

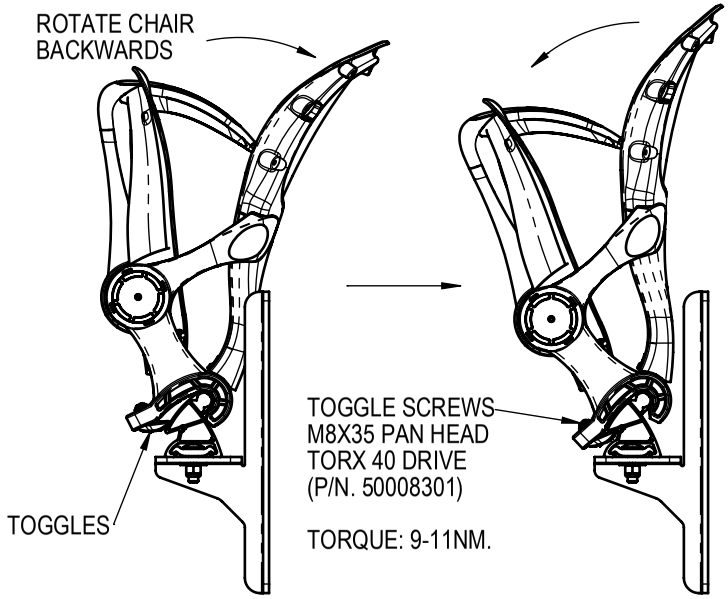
CORRECT ARM POSITION

ARM HUB SCREW

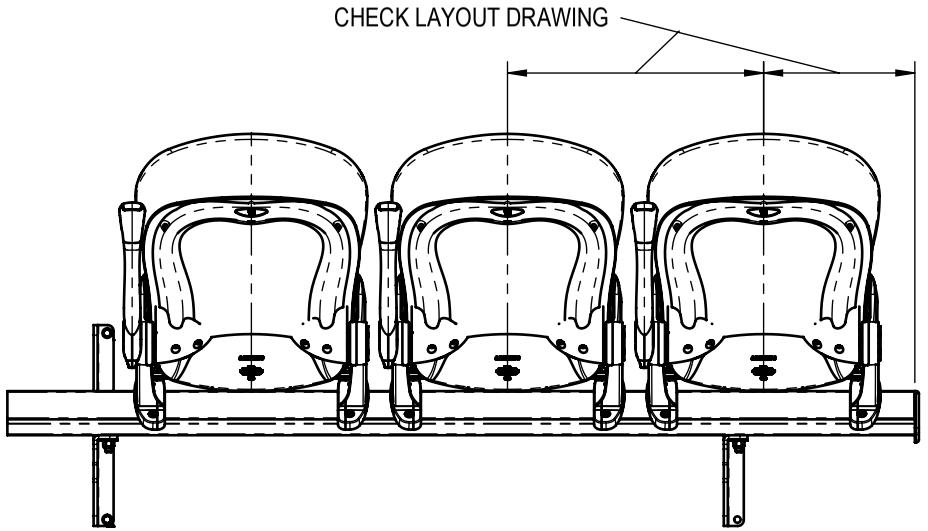
LENGTH OF SCREW TO USE:
- NO SPACER, USE 1-1/2" (P/N. 56014001)
- 1 SPACER, USE 2-1/2" (P/N. 56014451)
- 2 SPACERS, USE 3-1/4" (P/N. 56007021)

TORQUE: 9-11NM.

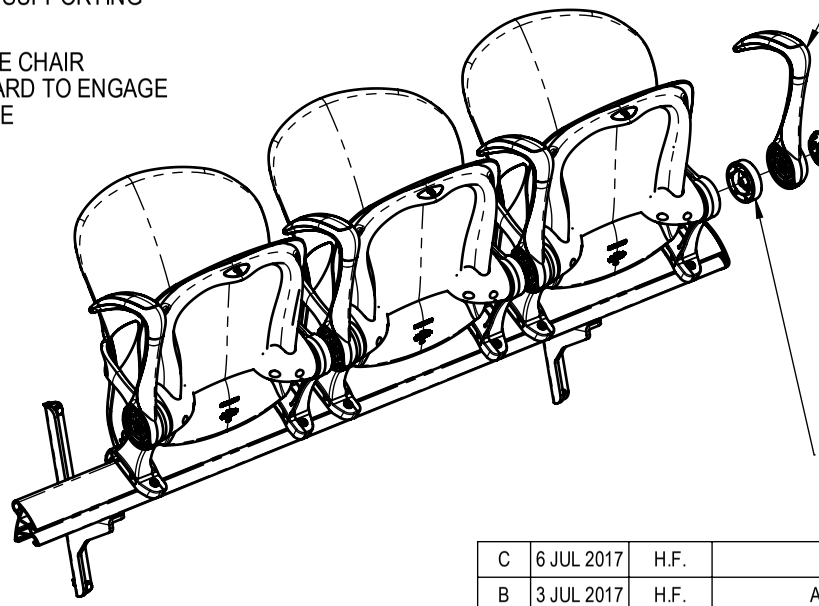
2. MAKE SURE BOTH THE TOGGLES ARE FREE TO ROTATE, LIFT UP THE CHAIR AND HOOK IT ON TO THE QUANTUM BEAM FROM THE BACK, THEN TILT THE CHAIR FORWARD. BOTH TOGGLES NEED TO BE UNDER THE BEAM. THE CHAIR SHOULD NOW BE SELF SUPPORTING ON THE BEAM. DO NOT TIGHTEN THE TOGGLE SCREWS AT THIS STAGE.



3. PLACE THE CHAIRS IN ACCORDANCE TO DIMENSIONS SET OUT IN THE LAYOUT DRAWINGS. TIGHTEN TOGGLE SCREWS WITH 9-11NM TORQUE.



4. INSTALL EOR ARMS



EOR ARM
- NO FILIGREE PANEL (P/N. 90180301)
- WITH FILIGREE PANEL (P/N. 90180291)

ROW ID DISK CARRIER (P/N. 90180261)
- CLEAN WITH CLEANING ALCHOHAL PRIOR TO FITTING THE ADA LABEL

ROW ID (P/N. 93910101)

ARM HUB SCREW

SCREW LENGTH TO USE WITH / WITHOUT ROW ID DISK CARRIER:

Installation Criteria

Layouts are submitted based on the following conditions:

1. *Verification of compliance with all relevant building codes is the exclusive responsibility of the customer and / or architect.*
2. *Seating layout is subject to site survey.*
   a. *Field verify all set out dimensions including riser heights and plat depths prior to drilling. Any significant variation to layout must be approved prior to proceeding.*
   b. *When installation is not included in Camatic's contract, verification of site building dimensions is the responsibility of the client.*
3. *Concrete Fixing Criteria*
   a. *Concrete is to be a minimum of 20 MPa (3000psi) compressive strength (28 day) and have a density of not less than 2400 kg/m³ (150lb/ft³).*
   b. *The surface shall be smooth and flat to with in a maximum of +/– 3.00mm (1/8") over 1500mm (60") measured with a straight edge.*
   c. *Risers shall be plumb to +/– 3.0mm (1/8") over 1500mm (60").*
   d. *Floor mounted seating will require minimum 75mm (3") thick concrete with minimum 45mm (1¾") impediment free anchor installation zones at mounting locations.*
   e. *Riser mounted seating will require minimum 100mm (4") thick concrete with minimum 65mm (2½") impediment free anchor installation zones at mounting locations.*

   If site details / specifications do not conform to the above, Camatic is unable to accept responsibility for the installation.
4. *Timber Floor Fixing Criteria*
   Due to the nature & variations in timber floors Camatic P/L is unable to supply specific specifications. The following information is based on installations that to have been successfully installed. Timber floors and structure should have the integrity to accommodate the chair loading requirements.

   Preferred Method: The use of specific timber fixings (such as: Type 17 or coach screws) on a one piece or composite structural ply floor of 32mm thickness. If a 32mm structural ply floor is not available, then appropriate battens fixed to the underside of the floor must be used to provide suitable depth of fixing engagement.

   When fixing chairs to timber flooring, it is recommended that flooring details be submitted to Camatic Pty Ltd, for review prior to finalizing timber flooring specifications.

CAMATIC
SEATING

Proposed Work Plan & Construction Schedule

Authorised By: Ken Griffiths

FOREWORD

This document has been prepared by Camatic Seating as a controlled document specifically for:

City of Fayetteville, NC - Baseball Stadium

This document is designed to reflect the Quality Policies and Practices of Camatic Seating.
Camatic Seating operates within an integrated management system that includes certification to AS/NZS ISO 9001:2000 – Quality Management System Requirements.

DISTRIBUTION OF PROJECT QUALITY PLAN

This quality plan is subject to control via the Camatic Management System. **Controlled** copies of the Quality Plan are issued only to those personnel listed in the table below. Issuing is conducted via the Camatic Document & Records Management Procedure (CMS 360-100) and the use of the Documents Register.

Where amendment is necessary, it is the responsibility of recipients of **controlled** copies to replace the appropriate pages according to the amendment sheet sent with all amendments. **Uncontrolled** copies of the manual, which are issued to external companies, are not updated with any such amendments.

All **uncontrolled** copies, used for external purposes, will be endorsed with the following statements:

"UNCONTROLLED COPY"

"FOR INFORMATION ONLY - NO FOLLOWING AMENDMENTS"

DISTRIBUTION LIST	
1.	CAMATIC PROJECT MANAGER
2.	CAMATIC ENGINEERING MANAGER
3.	CAMATIC QA MANAGER
4.	INSTALLER
5	GENERAL CONTRACTOR

Note: The Distribution and control of this quality plan is controlled by the above distribution list. The names listed above are accurate at date of issue. Manuals will only be updated in the event of the quality plan being updated.

SECTION 2 - INSTALLATION PROCEDURES

2.1 Purpose

The purpose of this procedure is to provide instruction to relevant personnel on the processes and coordination involved in the on-site installation of Camatic seating products.

2.2 Scope

This procedure deals with all aspects of coordinating site verification, onsite installation works, inspection and test, and site variations.

2.3 Definitions

GC	- General Contractor/construction Manager
Camatic	- Contractor
Installation Sub-contractor	- Installation Sub-contractor appointed for the purpose of completing all on-site activities for and on behalf of Camatic
ARCH	- Project Architect appointed by the stadium owner / GC.
RFI	Request for Information (FORM 600-005).
RFP	Request for Proposal
ASI	Architects Supplementary Instruction
CCD	Construction Change Directive

2.4 References

Procedures	Identification Code
Document Control	CMS 360-100
Control of Non-conformity	CMS 530-100
Project Installation Schedule	

2.5 Installation Flowchart

2.6 Installation Procedure

2.6.1 Project Manager

The Project Manager is responsible for the overall day to day management of the Project including:

a) Acting as the main project point of contact between GC and Camatic.
b) Acting as the technical liaison between GC and Camatic.
c) The development of scheduling, planning and monitoring of project installation related activities.
d) Co-ordination of the installation activities of sub-contracted installers.
e) The taking of corrective actions to bring the planned activities back onto plan/schedule.
f) Conduct Internal QA Audits as required. Nominal requirements are one QA Check sheet per bay per week.
g) The completion of monthly progress claims..

2.6.2 Project Installation Schedule

The Project Manager is responsible for establishing and maintaining The Project Installation Schedule. This schedule is prepared according to TGC sequencing requirements and is submitted to and approved by GC. All updates of the schedule must be submitted to GC.

The Drilling-Installation Schedule documents the agreed scheduled drilling and installation dates for each sector of the stadium. The Production Schedule documents the manufacturing, container shipment and installation dates. GC is obliged to provide sufficient work areas to be available when required by the schedule.

Camatic will notify GC of any potential delays in access to a required bay via the use of the Site Request for Information (RFI) Form (FORM 600-005).

2.6.3 Installer Pre Commencement Brief

The Project Manager will contact the installer and arrange for a meeting to review the requirements of the project, including the applicable quality requirements, and forward copies of all relevant documents, drawings, etc. to the installer.

2.6.4 Installer(s)

The installer is responsible for sourcing all labour, equipment and tools that are required to ensure the project quality standards and requirements are achieved. The installer is responsible for training all employees to ensure that they are competent in the installation of seats.

Reporting to the Project Manager, the Installation Project Supervisor is responsible for the onsite day to day activities including site labour planning and control. Duties shall also comprise:

a) Ensure check sheets, accident sheets, work instruction are collected each week and returned to Camatic's office.
b) Ensure material/equipment is delivered to site when required.
c) Represent Camatic at site meetings when and where required.
d) Represent Camatic as the onsite Quality Assurance Representative.
e) Hold regular safety meetings with employees as required.
f) Carry out and document preliminary completion /commissioning test.
g) Conduct any on site risk assessments
h) Maintain inventory of all Camatic products on site & in local storage.
i) Reconcile and hand over attic stock

2.6.5 Site Establishment/Induction

Site specific.

2.6.6 Installation Stages

Installation work for the project has been split into six major stages, as follows:

Stage 1: Site Handover and Acceptance

Site acceptance is the responsibility of the Installer. The installer is to ensure that the site:

- meets all safety requirements;
- is dimensional correct to specifications;
- provides sufficient work area;
- is accessible; and
- preceding trades have completed required work to an acceptable level.

The "QA Checklist – Stage 1 Handover & Site Acceptance" (FORM 601-002) is used to perform the review of the site. Acceptance of an area that does not comply with the builder's obligations constitutes changed conditions. In this circumstance Camatic will refer the matter to GC for further instructions via the use of the RFI (FORM 600-005)

Stages 2, 3 and 4: Anchors, Brackets and Seats.

The completion of these three stages is as per the Installation Work Flowchart on page 7.

Stage 5 - Punch List and Final Completion

At the appropriate time, Camatic will apply for Substantial Completion of each Bay.

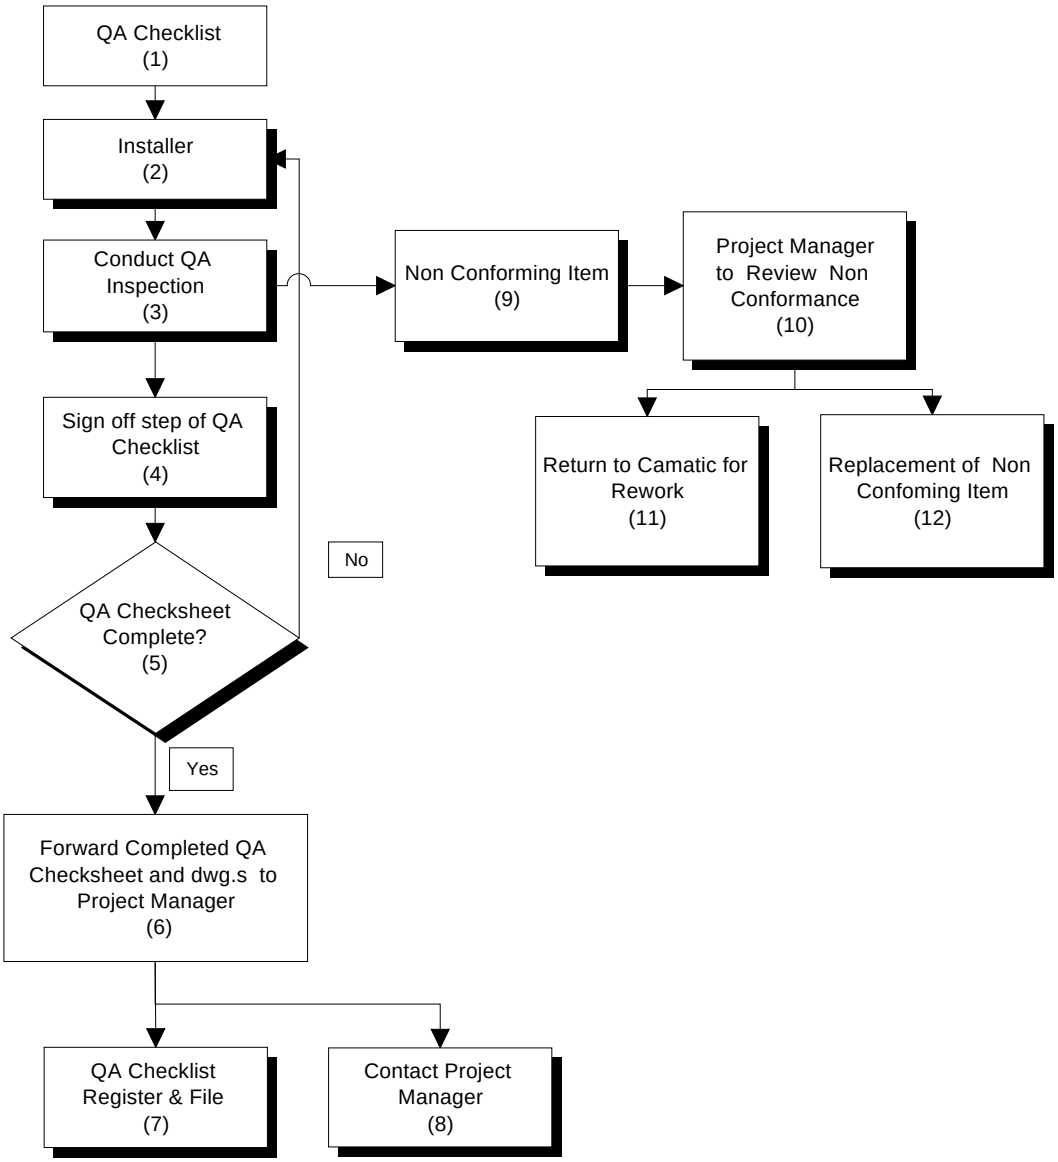
The Installer, GC and owner's representative are to jointly raise a Punch list (Form 600-006) of minor defects and omissions for each Bay.

The Punch list is to be signed off by GC and owner's representative indicating that the bay has achieved Substantial Completion subject to the Punch list. This signoff means that GC has accepted the work as per the Closeout Procedures in the Specification.

When all the Punch list items for the Bay have been completed or corrected, Camatic will return a copy of the Punch list with a written certification.

Stage 6 Attic Stock Hand Over - At the end of the Project the attic stock will be reconciled against the contract requirement and turned over to GC.

Section 3 Quality Records Flowchart.



3.1 QA Checklist

Onsite installation instructions are via the Camatic drawings for the project. The Installer & the Project Manager are issued with a copy of the Project Installation folder, which contains all the required drawings for the project.

The Quality Manager is responsible for establishing a QA Checklist for each individual bay/section for each stage of installation work to be carried out. Each QA Checklist provides the installer with installation instructions, onsite inspection and test instructions/records.

3.1.2 Conduct QA Inspection

The Installer is responsible to check that each installation step is inspected / tested as per the QA Manual.

3.1.3 QA Checklist Completion

After the completion and signoff of any step from the QA Checklist, the Installer may proceed with the next step, until all steps of the QA Installation Flowchart are complete.

After the completion of Stage 2 - drilling and setting of anchors; the installer is responsible for arranging or conducting an anchor tension test according to Work Instruction.

After the completion of Stage 3 - installation of brackets and beams; the installer is to either:

a) sign-off and return the drawing to Project Manager indicating that the beams used are identical to the drawing/take-off; or,
b) mark up the drawing/take-off and return it to the Project Manager for rectification.

After the completion of Stage 4 - installation of the chair to the beam; the installer and/or the Project Manager are to have the drawing for the specific bay signed–off by GC, indicating Substantial Completion of the bay. Any differences between the drawing and the actual installation are to be documented on the drawing. The drawing is then to be returned to Camatic for updating and submittal of “As built” drawings.

Punch lists are to be generated and completed as part of the final inspection process. Signed off punch lists by the customers representative indicate the installation satisfactorily meets the customer’s requirements. If rectification of non-Conformances is required after completion of punch list GC / Customers representative is to sign off reworked items indicating substantial completion of area reviewed.

3.1.4 Forward Completed QA Checklist to Project Manager.

Each completed and signed off QA Checklist is to be returned to the Project Manager on a Sector by Sector basis.

3.1.5 QA Checklist Register & File

The Quality Manager is responsible for documenting the return of the QA Checklist(s) in the QA Installation Checklist Register (Form 601-001) and the storage of QA records until formally submitted to GC at closeout. As the register is updated a copy is to be forwarded to the Engineering, Manufacturing and Project Managers.

3.2 Non-Conforming Items

If during the installation works, a product is found to be defective or unsuitable for use it is to be segregated from the conforming items. Details of the non-conforming product are to be completed on the "On Site Defective/Damaged Goods/ Variance Report" (Form 600-002) for on forwarding to the Camatic Quality Department. The quality department is responsible for conveying the details of the non-Conformance to relevant managers.

3.2.1 Review of Non Conformance by Project Manager

The Installer is to contact the Project Manager to review the non-conforming part for disposition. Whilst completing the review, the Project Manager will consult with all relevant managers of department to ascertain the required corrective and preventive actions (530-01).

3.2.2 Rework/Replacement of Non-Conforming.

If the Installer receives instructions to return the non-conforming part to Camatic for rework/replacement, the Installer is to attach the "On Site Defective/Damaged Goods/ Variance Report" (Form 600-002) to the goods.

On return to Camatic, the store person receiving the non-conforming goods is to notify the Quality Department to arrange the raising of a Non Conformance Report (530-01) for the rework. Rework is processed as per the "Defective Non-Conforming Goods Procedure".

3.3 Progress Reports

Daily Reports

The Installer is responsible for submitting to Camatic project manager by 12.00 PM each day a copy of the "Contractors Daily Report" (Form 600-007) for all work performed the prior day.

Weekly Reports

(Camatic Internal Report Only)

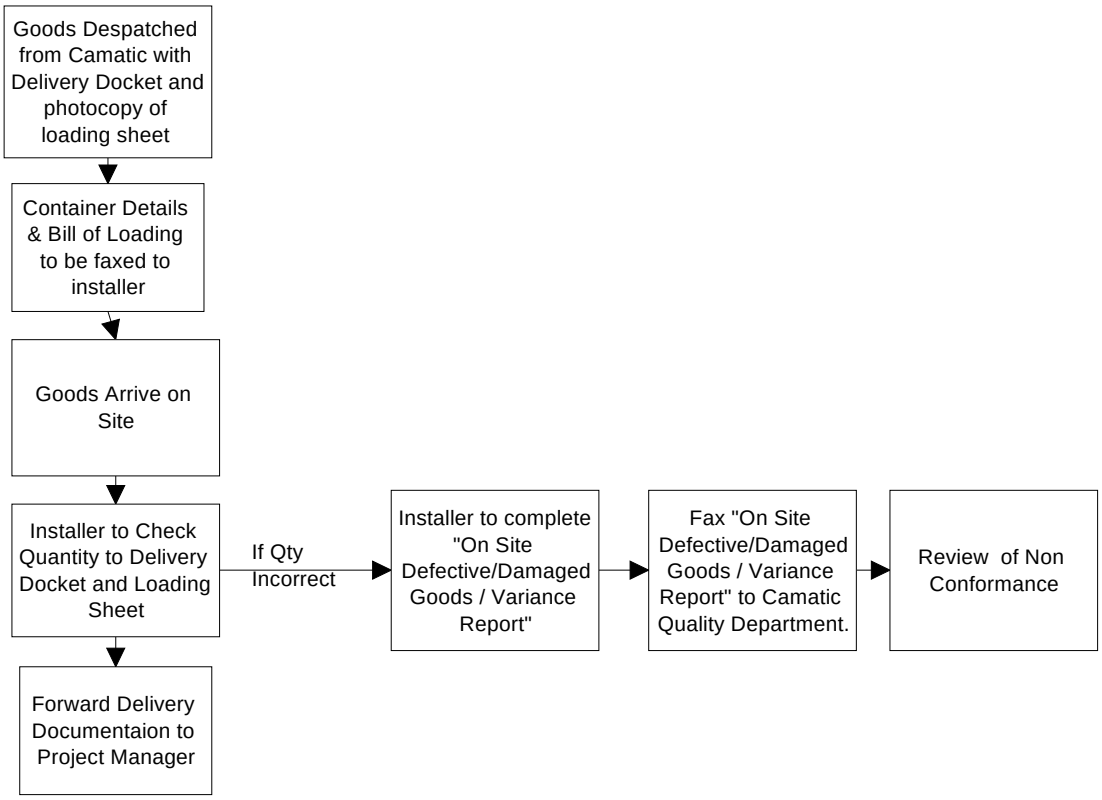
The Project Manager is responsible for summarising the daily reports and issues arising to Camatic on a weekly basis. The "Camatic Weekly Report" is to include an updated copy of the Site Progress Analysis Sheet (Form 600-003).

Monthly Reports

A copy of the Site Progress Analysis Sheet (Form 600-003) and the draft of the Progress Claim Form are to be completed and forwarded to the Camatic Operation Manager for review. The Progress Claim will be authorised by the Operations Manager who will forward the report to the Camatic accounts department for processing as per the Accounting & Payments Procedure.

SECTION 4: RECEIVING GOODS ON-SITE.

4.1 Site Receiving Procedure



If Quantities are incorrect, the installer is to complete the "On Site Defective/Damaged Goods/Variance Report" (Form 600-002). The report is to be forwarded to the Project Manager, who will arrange for any Corrective Action to be taken and to the Quality Manager who will arrange for any preventive action to be undertaken.

SECTION 5: SITE VARIATIONS, RFIs & RFPs

5.1 RFIs & RFPs

Head Office

All General Contractor Requests for Information (RFIs), including all drawing issues, Requests for Proposal (RFPs), and Site Variations are to be forwarded to Camatic.

5.2 SITE INSTRUCTIONS

All Site Instructions to The Installer are to come from Camatic via the use of the Site Instruction Form (Form 600-001).

SECTION 6: INSTALLATION – INSPECTION & TEST PLAN

6.2 Inspection & Test Plan - Quantum Seating

No.	Details	Inspection/Test Method	Frequency	Acceptance Criteria	Record

Resume

As founder and Vice President, Geno is committed to surpassing his own accomplishments achieved throughout his career in the industry. It is his goal to carry and turn over a successful installation experience to each and every client. He has been in the seating industry for over 20 years in this capacity in which he has managed projects with contract costs from $10,000 to $2 Million.

Seating Installation Group, LLC – St. Petersburg, FL May 2013 - Present
Vice President, Owner

Working in the seating installation business since 1993, Geno is currently in charge of managing all field operations. His duties include supervising all Project Managers, pay applications and direct contact with the general contractor's project management staff.

Primary Responsibilities
- Oversee day-to-day operations to support the growth of the company.
- Strategic planning and goal-setting keeping the entire organization on track.
- Managing daily operations of personnel, purchasing, and onsite crews.
- Review activity reports and financial statements.
- Develop strong relationships with outside partners and customers.

LG Chairman, LLC – St Petersburg, FL April 2003 – May 2013
Vice President, Owner

Primary Responsibilities
- Lead and evaluate the work of onsite managers and foreman.
- Monitor operations budget performance and engage in company budgeting.
- Oversee the complete operation of the company.

Chairman, Inc. – St Petersburg, FL 1993 – April 2003
Field Operations Manager

Primary Responsibilities
- Managed multiple jobsite crews across the country.
- Create and oversee the tools utilized in the field to improve operation effectiveness.
- Plan and schedule installation projects.
- Address all issues and concerns relating to the field office operations.
- Monitor and manage field expenses within a profitable budget.

EDUCATION

UNIVERSITY OF MELBOURNE, MELBOURNE BUSINESS SCHOOL
Master of Business Administration (Part Time) ***Jan 2002 – July 2004***

- Specialised in strategy, operations & finance; with 2nd class Honours

MONASH UNIVERSITY, MELBOURNE. **Melbourne, Australia**
Bachelor of Mechanical Engineering (Honours) ***1992 – 1995***

EXPERIENCE

Camatic Seating ***July 2008 – Present***
Camatic is a privately owned, producer of stadium and theatre seating, supplied to the construction industry globally.
Engineering & Projects Manager - Melbourne

- Projects included MCG, Wimbledon, Dallas Cowboys & AAMI Park.
- This role is part of the senior management team reporting to the General Manager
- Primarily responsible for all product development, new asset installation & maintenance of all factory facilities and company assets.

Air International- Thermal Systems Australia ***Jan 2007 – July 2008***
Air international is a global automotive tier one supplier.
Engineering Manager - Melbourne

- Requested to lead the engineering department through a difficult cultural change.
- Strong emphasis on the management of staff, their behaviors and clear performance feedback.
- Managing a large department of 25 people of various disciplines (representing 50% of the organization).
- Staff includes electronic hardware/software & design engineers, designers, significant testing facility, maintenance team & administration staff.
- This role is part of the management team reporting to the General Manager.
- Worked closely with the GM to achieve the desired professional culture.

Air International- Thermal Systems Australia ***Jul 2003 – Jan 2007***
Air international is a global automotive tier one supplier.
Business Unit Manager

- Managing a significant HVAC design & development program for implementation in 2006.
- Responsible for a $20M development budget and $50M in annual sales.
- Includes team management of 15 people and full monthly P&L, Balance sheet and cash flow financial analysis and expenditure reporting of the business unit.
- Team included electronics & software development, design engineering and supply chain logistics.
- Role included client contract negotiations and contract variation negotiations throughout the development program.
- This role is part of the management team reporting to the General Manager.
- Achievements: delivering project $1M under budget while being the most reliable product in company history.

ArvinMeritor
ArvinMeritor is a global automotive tier one supplier.
Senior Program Manager- Melbourne ***Jul 2002 – Mar 2003***

- Delivered several very success design and development programs with contracts to GM, Ford and Mitsubishi. The combined sales of these projects represented $2.0M.
- Responsible for up to 5 staff members (Engineers, CAD, administration, Test lab), and a budget of $500,000.
- Significant manufacturing/operations exposure as this role was based in the manufacturing plant.
- Tier one supplier to Toyota with significant exposure to lean TPS manufacturing practices.

Senior Application Engineer – Detroit, USA ***Jan 2001 – Jun 2002***
18 month assignment in the ArvinMeritor headquarters in Detroit
Personally recommended for this position by the global division VP after several successes in Australia.

- Co-setup and coached new Engineering development team of six people.
- Successfully delivered a product development contract with Ford. This contract involved different design, manufacturing and customer locations. This Project represented USD$55M/yr in sales to ArvinMeritor.

ArvinMeritor
ArvinMeritor is a global automotive tier one supplier.
Product Engineer through to Senior Product Engineer ***Dec 1995 – Dec 2000***

- Design development and testing of various automotive mechanical assemblies
- Three month assignment in an ArvinMeritor facility in France and short trips to Japan and Thailand for new business contracts.
- Significant manufacturing/operations exposure as role was based in the manufacturing plant
- Tier one supplier to Toyota with significant exposure to lean TPS manufacturing practices.

ADDITIONAL

Camatic Project Profiles

About Us: Global Experience:

CAMATIC

Leading the world in design, comfort, and technology.

The Camatic Seating team has worked on high profile public projects as well as exclusive private sites the world over. Our global experience equips us to provide seamless service – from initial consultation to design, site delivery, and final installation.

Our clients have consistently experienced a superior level of engineering expertise that has lead to breakthrough solutions in challenging environments.

Overview: Our Locations in the US

CAMATIC

Leading the world in design, comfort, and technology.

Corporate Headquarters:

Melbourne, Australia

- 350,000 Square Foot Manufacturing Facility
- Plant Capacity of 600,000 seats per year and increasing

North American Operations:

Texas

- US Corporate Office

Kentucky

St. Louis MO

- Ohio - Manufacturing & warehouse
- Louisiana - Aluminum extrusions.
- California - Injection molding and assembly
- Florida - Warehousing

About Us:

CAMATIC

Leading the world in design, comfort, and technology.

Camatic is the first company in Australia to manufacture commercial and venues seating from design concept right through to finished product in a single location. Camatic has developed a national reputation for innovative design and manufacturing excellence. Throughout the 1980's and 1990's new designs and seating concepts were successfully introduced into the office, theatre, and stadium markets, resulting in the company becoming the largest manufacturer of theatre and stadium seats in Australia.

Major international success arrived during the mid 1990's with the company winning world-wide projects such as the refurbishment of the Pasadena Rose Bowl and the contract to supply stadium seating for the Atlanta Olympic Games. Further major successes ensued both domestically and around the globe. To facilitate the increasing amount of overseas interest in the theatre, stadium and performing arts seating products, international offices have been established in the United States and Europe. A network of Sales Agents in various strategic parts of the world completes the Camatic team and ensures that Camatic products are presented daily to potential users.

For over fifty years Camatic Seating has delivered professional customer support, best quality products and innovative solutions. We are known the world over as the first choice in design, comfort and technology.

CAMATIC

Leading the world in design, comfort, and technology.

Why Camatic Seating?

CAMATIC

Leading the world in design, comfort, and technology.

Unmatched Comfort and Design:

- Continuously Investing in Research and Development.
- New and Innovative Designs.
- Lowest Life Cycle Cost.

Vertically Integrated:

- Manufacture All Chair Parts In-House.
- Use of High Quality Engineering Grade Polymers.
- Integrated Quality Control.

Increased Capacity – Example Below:

1. Dallas Cowboys – 65,656 Seats Initial Design.
2. Camatic Using Beam Mounted Seating Increased the Seating Capacity to Include 3,100 Additional Seats.
3. (12) Events per Year @ $70 Per Ticket = 2.6 Million a Year in Increased Revenue.

Flexibility to Reconfigure for Special Events (Example Below):

1. Dallas Cowboys – 16,000 Club Seats
2. Add 850 Seats for Special Events.
3. (1) Event @ $1,000 per Ticket = $850k in Increased Revenue Per Event.
